

‘User Portal for Bit Mascot’ Web Application

Dear Concern,

I applied for the job post 'Java Developer' for Bit Mascot (Pvt.) Ltd. On 7th September. On 8th September I got a feedback in mail and was asked to do an assignment. I tried my best to apply all the required topics in my project.

Description of my project (User Portal for Bit Mascot)

1. I used [PHP](#), [HTML](#), [Bootstrap](#), [jquery](#), [ajax](#), [Database: Mysql](#) in my project.
2. I applied [secured login](#) with Bootstrap design form.
3. Session, cookie of logged in user was handled strongly so far.
4. When registration, [Email availability](#) was notified and shown with jquery, ajax. It was also assured whether any field is filled or not.
At first all user has registered with password: 123
5. There is a user profile page where any user can [change password with true authentication](#).
6. Also there is an admin panel where an admin can logged in with default email and password as it was said.

Email: admin@localhost.local

Password: admin

Admin can see all user information and can [search by any criteria \(like name\)](#). This was done with [jquery dataTable](#).

Actually I focused less on the outlook, rather tried to follow all the instructions. Kindly review my project and I will be very grateful, if I am informed with a feedback whether any correction is needed. Thank you so much.
